ABOUT ME

I am a third-year Computer Engineering student and a proactive leader with a deep-rooted passion for technical coordination and community building. As the President of the ÇOMÜ Aviation Club, I manage a community of over 1000 members and coordinate strategic UAV operations, which has instilled in me a strong sense of operational discipline and team management. My engineering philosophy is built on bridging digital systems with the physical world through multidisciplinary innovation. My technical expertise involves architecting decentralized applications and smart contracts using Move and Solidity languages on blockchain, alongside developing LLM-based agentic workflows and machine learning solutions. Additionally, I engineer ESP32-based hardware for my technopark-backed startup, InterKey, and build immersive 2D experiences with Unity and C#. I am a lifelong builder who adapts rapidly to emerging technologies, dedicated to creating structured, scalable, and practical software solutions.

EXPERIENCE

Founder & Project Lead / InterKey / Canakkale Teknopark Pre-Incubation

Leading the end-to-end R&D of an ESP32-based smart controller, integrating embedded C systems with real-time mobile application workflows.

President | COMU Aviation Club

Leading a community of 1000+ members, managing strategic project planning, and coordinating technical training programs for aviation enthusiasts.

Blockchain Developer

Architecting decentralized applications using Move on Sui, focusing on programmable objects and implementing high-throughput logic on Monad

Web developer

Founding and managing ilion7.web to deliver high-performance, responsive web applications and SEO-optimized digital solutions for local businesses

UAV / Drone Instructor Assistant | SoleilSky

Assisted instructors in UAV-O / UAV-1 theoretical and practical training sessions, supporting flight operations, safety procedures.

Coordinator | COMU Simulation Center

Provided technical coordination for the setup, usage, and operational processes of hardware and software infrastructures used in simulation-based training..

Unity Game Developer

Building 2D games with C#, implementing complex game mechanics, physics engines, and state machine architectures for seamless gameplay

PROJECTS

NeuralAir / Decentralized Autonomous Aviation Network (DAAN) / Monad Blitz Hackathon (2nd Place)

Technologies: Parallel EVM Execution, DePIN Infrastructure, AI Agentic Workflows, MAVLink/ROS2 Integration, High-Throughput Telemetry, Next.js 14

Interkey / Smart Handlebar Control System (Ongoing Project) -

Technologies: ESP32, Embedded C / Microcontroller Programming, Mobile App Development, Bluetooth/Wi-Fi, 3D Printing

Aura AI / Microservices-Based Multi-Service AI Platform / BTK Academy AI Hackathon

Technologies: Microservices Architecture, Monorepo, Node.js, TypeScript, React 18 (Vite), RESTful APIs, API Proxying, Express.js, Axios

Sharefy / Blockchain-Based Donation Platform / Blockchain SUI Hackathon

Technologies: Sui, Move, Python, NFT, Web3 Wallets, HTML, CSS, JavaScript

Tak App / PWA-Based Career & Opportunity Tracking Hub

Technologies: Next.js, TypeScript, Supabase (PostgreSQL), Serverless Functions, Web-Push API, Vercel Cron, PWA, Web Scraper/Crawler Automation

MONAI / Web3 Pay-As-You-Go SaaS Platform / Blockchain Monad Hackathon

Technologies: Python, Ethers.js, MetaMask Web3 Integration, Monad Testnet, Flask-CORS, Micro-transaction Logic, Real-time Terminal Logging

Call AI / AI-Powered Voice Automation & Communication Agent

Technologies: Vapi AI (Voice AI), Twilio API, Webhooks, API-Driven Automation, Programmable AI Agents, Automated Mail Workflows

EDUCATION

Çanakkale Onsekiz Mart University

Computer Engineering (2023 – 2027 / (Expected)

- Aspire Leaders Program-Ongoing
- DGCA Certified UAV-O/1 Pilot License
- Akbank | Cyber Security-Ongoing
- English: Intermediate (B1)

SKILLS & COMPETENCIES

- **System Engineering & Distributed Architecture:** Microservices Architecture, Monorepo Management (npm workspaces), PWA Architecture, Serverless Functions (Vercel), RESTful API Design & Gateway Management, Edge Computing.
- **AI & Automation & Neural Orchestration:** LLM-Agentic Workflows, Machine Learning (ML), Computer Vision (CV), Voice AI Automation (Vapi) Programmable AI Agents, Web Scraping & Crawler Automation, Multi-Agent Systems, RAG Implementation.
- **Web3, Parallel EVM & DePIN Ecosystems:** Smart Contract Development (Move & Solidity), Trustless Escrow Mechanisms, Hex Calldata Analysis, Web3 Wallet Integration (Ethers.js, Wagmi), Monad & Sui Ecosystems, NFT Minting/Burning Logic, Parallel EVM Execution.
- **Hardware-Software Co-Design & Robotics:** MAVLink/ROS2 Communication Orchestration, Sensor Fusion (IMU/GPS Data Processing), BLE/Wi-Fi Mesh Networking, Embedded C/C++ (ESP32), Hardware-in-the-Loop (HIL) Simulation.
- **Technical Stack:** TypeScript, Node.js, Python (Flask), React 18 (Vite), Next.js 14 (App Router), PostgreSQL (Supabase), Embedded C (ESP32).
- **Leadership & Coordination:** President of COMU Aviation Club, Technical Project Management, Stakeholder Communication, UAV/Drone Training Coordination
